- Note: eggs sold to end consumer are exempt from egg dealer's licensing and requirements

License Fee- \$10 annually- renewed June 1st annually

- Pending initial inspection. Annual inspections, thereafter.

Eggs Handling Requirements: ([Article 7-11 Egg Regulations](#))

- Water Sampling- well water shall be sampled by the egg dealer
 - Acceptable results are required to be submitted to NDDA prior to obtaining a license and annually to renew the license.
- Eggs must be sourced from healthy hens
- Store eggs at <45°F, including during temporary storage and transportation.
 - Fridges must be free from other objectionable odors
 - Thermometer in coolers and fridges
- Egg Cleaning
 - Manual or automatic cleaning of eggs acceptable.
- Egg Sanitizer
 - Sanitizing solution shall not be less than 50ppm and no more than 200ppm chlorine or,
 - Other EPA approved sanitizers will be accepted. EPA reviewed and approved instructions for use on shell eggs 21 CFR 178.1010 shall be on the bottle or if not labeled directly on bottle, EPA approved instructions for sanitizing shell eggs shall be provided at the egg dealer's facility.
- Egg Candling
 - Training available by ND dairy inspector
 - Must have candling light available (hand candling permissible)
 - 87% eggs must be acceptably free of checks (micro-cracks) and defects
- Facility Requirements- grading and packing area and equipment
 - Sound construction to prevent vermin or other pests
 - Clean during cleaning and packaging
 - Sanitary to prevent contamination during handling
- Carton and labeling
 - Clean, sound, dry flats and cartons
 - Reuse only allowed if washed and sanitized (made of durable materials)
 - Cartons must identify producer's name and address
 - Maybe blank cartons or custom labeled (reusing other's cartons not acceptable)
 - Packed dates are required. Other "use by" or "expiration" dates shall not exceed 45 days from the pack date
 - Transport containers shall be covered and kept under 45F during transport and storage

For Applications Call 701-328-2299 or 701-220-9596 or email Nathan Kroh at nkroh@nd.gov

*****All Non-Traditional Poultry, such as pheasants, quail and chukar, require a permit to Possess, Propagate, or Domesticate (PPD).** Contact ND Board of Animal Health for information 701-328-2655

Federal Regulation- 21 CFR 101.17(h)(1) The label of all shell eggs, whether in intrastate or interstate commerce, shall bear the following statement:

SAFE HANDLING INSTRUCTIONS: To prevent illness from bacteria: keep eggs refrigerated, cook eggs until yolks are firm, and cook foods containing eggs thoroughly.

Check Sanitizers for EPA acceptability for Shell Egg Use:

The Environmental Protection Agency (EPA) regulates sanitizer use and labeling. If a sanitizer is approved for shell egg use, the label must be registered with EPA.

Sanitizers designed to eliminate bacteria and viruses are considered pesticides, according to the EPA. Not all sanitizers are approved for egg sanitizing, so to determine if a certain sanitizer is approved for shell egg use, you can view the label approval forms on the EPA's website.

How to Search EPA Labels:

To find an EPA registered label:

Visit the EPA's "Pesticide Product and Label System" or PPLS:

<https://iaspub.epa.gov/apex/pesticides/f?p=PPLS:1>

Several search options are available:

- EPA registration number; or
- Product or Company Name; or
- Chemical Name.

For example-

-Search for "Bleach" under Product or Alternative Brand Name and 59 registrations will be available to view. You can then match the EPA Reg. No. found on the sanitizer bottle.

-You may have to select "related registered product" as some formulations are approved under one product and simply labeled as a different brand.

-Select a the "Accepted Date" PDF to view the registration application.

-To determine if product is approved for Eggs- Search "Egg" within the pdf, using the Find function.

If approved, the instructions for shell egg use will be described within the EPA label registration PDF.

Commonly found EPA approved egg sanitizers:

***The ND Department of Agriculture does not endorse any specific products. The list below is not an exhaustive list and egg dealers are free to select any sanitizer that is EPA approved for Shell Egg Sanitization.

"Clorox Bleach" (germicidal: food service applications)- EPA Reg. NO 5813-1

"Clorox Advanced Bleach" (shares registration numbers with CGB1)- EPA Reg No. 5813-102

"Clorox Germicidal Bleach1" also known as Puma – EPA Reg No 5813-100

"Vertex Germicidal Ultra Bleach" EPA Reg No. 9616-13

"MAQUAT 10" has same EPA number as "Steramine" both made with same active ingredients formulation EPA 10324-63 (with different sub registrations).
